

OTT Platform – Full Stack Project (Live Deployment)

Project Overview

This project is a fully deployed full-stack OTT (Over-The-Top) streaming platform. It demonstrates secure authentication, real-world API integration, and cloud deployment using modern frontend and backend technologies.

Frontend (Vercel):

<https://ott-frontend-kk5rwf0va-madhumitha-perumals-projects.vercel.app>

Backend (Render):

<https://ott-backend-b3rj.onrender.com>

Database:

MySQL hosted on Railway

Technology Stack

Layer	Technologies Used
Frontend	React (Vite), Axios, React Router
Backend	Spring Boot, Spring Security, JWT Authentication
Database	MySQL (Railway)
Deployment	Vercel (Frontend), Render (Backend)

Key Features

- User registration and login functionality
- JWT-based authentication with secure password hashing
- Movie data fetched using TMDB API
- Cross-origin communication enabled using CORS configuration
- Fully deployed and production-ready

Application Architecture

The React frontend communicates with the Spring Boot backend through REST APIs. The backend authenticates users using JWT tokens and interacts with a MySQL database hosted on Railway. The entire application is deployed using cloud platforms suitable for production use.

Project Status

- ✓ Live and accessible from any device
- ✓ Authentication working correctly
- ✓ Successfully tested in production environment
